

# 5<sup>th</sup> AXIS INC

Automated Production Manufacturing & Machining  
ISO 9001:2000 and AS9100B CERTIFIED

We made the switch to bio tuff because we had a myriad of cleaners floating around our shop, and I wanted to consolidate down to one product that could hopefully encompass all the work that our multiple products could do. I was also impressed with the bulk (55g) drum pricing compared to say our simple green products and 409. The samples I tried before making the switch showed that the bio tuff outperformed all of my other products greatly and that was at 50 percent dilution. So that doubled my savings right there.

We have now been using only the bio tuff for all our applications for over 2 weeks and could not be happier. We even use it in our ultra sonic parts cleaner, as well as CNC machine cleaning, floors, all general degreasing purposes and some machining applications. The bio tuff works great to bring out the finish of lots of the metals we machine here, such as, 6061 aluminum, all of our stainless Steels, tungsten, and even titanium. The feedback from the machinists, operators, and maintenance dept has been nothing but great. Not to mention the savings. Thanks to bio tuff our shop looks and smells even better than before!

THANKS

-J.R.
