

**STONE**  
BREWING CO.

---

Having clean equipment is a key essential on any packaging line. Previous to Bio-Tuff, Stone Brewing Co used multiple products to clean our packaging line. We had numerous products like: simple green, generic stainless steel cleaners, generic ultra-sonic cleaners, citrus based degreasers, etc. They all worked great as they should, but we had to use multiple cleaners to get the jobs done that Bio-Tuff can do.

We use Bio-Tuff as our main surface cleaner on our packaging line. We have a bottle of 50/50 blend of Bio-Tuff at each equipment station. Bio-Tuff is used to clean our Palletizer, Box Sealing Machine, Bottle Uncaser, Bottle Filler Crowner(hopper, chutes, and crowner bells), in our Ultra-sonic cleaner(to clean fill tube adapters, filler valve keys, crowner bells, etc), machine guarding, control box panels, stainless steel, and it does a fantastic job with hot water in a mop bucket. Our floors have never been cleaner since we've switched to Bio-Tuff. We switched to Bio-Tuff over a year ago and we are extremely pleased with the change. We are saving about \$200 for a 55 gallon drum compared to our previous cleaner/degreaser drum. Bio-Tuff cleans faster and does a better job than the other brand.

Thanks Green Mountain!
